STEM SHARK TANK

Overview:

STEM Shark Tank is an interactive, AI-forward workshop that prepares students for the workforces of today and tomorrow. Students will identify STEM-related problems in their communities, collaborate to create a research-backed business idea that solves the problem, build a prototype, and pitch their big ideas in front of a cast of celebrity judges!

Order of Operations:

1. Organize into groups of 5

Students will be organized into groups of 5, preferably with students they do not know. Students will pick a creative team name. Students will be assigned roles in the group. Research & Development- Research the problem, find data to support it and the research solution the team creates Engineering and Design- This subcommittee will design the prototype and ensure it is clear and easy to understand Sales- This group will be responsible for pitching the prototype with a clear explanation to the judges Although all students will collaborate on each of these aspects of the project, 1 or 2 students will LEAD each subcommittee.

2. Identify Problem in your Community

Student groups will identify a unique problem in their communities that can be solved by STEM! Pick from the Sample STEM Topics below or identify their own.

STEM SHARK TANK

Sample STEM Topics:

Sustainable Energy Sources
Containing Viruses/Infectious Diseases
AI Applications for Education Coastal
Resilience

Deep Fakes
Space Junk
Medical VR Applications
Cybersecurity / Cyberbullying

3. Use Design Thinking and AI to Brainstorm Solutions

A popular process used in today's tech workforce, Design Thinking is a method for rapidly brainstorming solutions to novel problems. Student groups will use this process, along with the help of free AI tool ChatGPT to craft creative new ideas to solve their problem of choice. Students will be taught about the pitfalls of lazily using AI as a shortcut, and how to avoid them.

4. Develop Prototype

Student groups will use their research to flesh out the idea in a detailed written description, which they will use to prompt the free AI image generation tool Midjourney with. Using Midjourney, students will be able to create a visual representation of their idea, that the design and engineering committee will use to draw a blueprint prototype on posterboard.

STEM SHARK TANK

5. Pitch!

Student groups will rehearse, then pitch their prototype, with a 1 minute time limit. For inspiration, students will be shown a sample pitch from a student. Their pitches will be judged by the following criteria:

- Knowledge about the Problem 1-10
- Viability of the Solution 1-10
- Creativity & Clarity of Presentation 1-10

6. Judge Review

“Shark” Judges will ask students questions about their pitch, then select their favorite pitches that they would like to “invest in”. The best pitches will win prizes!
